

VDC Teacher Application

Initial Deployment Configuration (Version 1.0)

Project: VDC Teacher Mobile Application

Purpose: Initial deployment configuration for the first production release.

Environment: Production (V1)

Backend: Supabase

Authentication: Administrator-provisioned teacher accounts (No self-registration)

Authentication Model

For Version 1, all teacher accounts will be created manually by the administrator through Supabase Authentication.

Teacher Workflow

1. Administrator creates the teacher account.
2. Administrator shares the login credentials with the teacher.
3. Teacher opens the VDC Teacher application.
4. Teacher logs in.
5. Teacher can only view and manage the classes assigned to them.

Version 1 intentionally excludes:

- Teacher Registration
 - Sign Up
 - Self-service Account Creation
-

Initial Teacher Configuration

The following teachers and class assignments will be used for the first production deployment.

Teacher 1

Basic Information

Field	Value
Name	Dr. Swati Anand
Role	Teacher
Department	Commerce & Arts

Classes Assigned

Course	Year	Section
B.Com	2nd Year	A
BDA	2nd Year	—
LSCM	2nd Year	—
B.A	2nd Year	—

Subjects Handled

- CV
- EVS

Permissions

- Take attendance
- Enter test marks
- Enter assignment marks
- View reports
- Manage teaching notes
- Send SMS to absent students

Teacher 2

Basic Information

Field	Value
Name	Sushma
Role	Teacher

Field	Value
Department	Arts & Commerce

Classes Assigned

Course	Year	Section
B.A	2nd Year	—
B.Com	1st Year	—
B.A	1st Year	—

Subject Handled

- English

Permissions

- Take attendance
- Enter test marks
- Enter assignment marks
- View reports
- Manage teaching notes
- Send SMS to absent students

Teacher 3

Basic Information

Field	Value
Name	Kavya
Role	Teacher
Department	Commerce & Arts

Classes Assigned

Course	Year	Section
B.Com	1st Year	A

Course Year	Section
-------------	---------

B.A	1st Year A
-----	------------

Subjects Handled

- QABD
- BDA

Permissions

- Take attendance
- Enter test marks
- Enter assignment marks
- View reports
- Manage teaching notes
- Send SMS to absent students

Access Control Rules

Each teacher must only be able to access:

- Their assigned classes
- Students belonging to those classes
- Attendance records for those classes
- Test records for those classes
- Assignment records for those classes
- Reports for those classes
- Their own uploaded notes

Teachers must **not** be able to view or modify another teacher's classes or records.

This restriction will be enforced using **Supabase Row Level Security (RLS)**.

Initial Academic Mapping

Course	Year	Section
--------	------	---------

B.Com	1st Year	A
-------	----------	---

B.Com	2nd Year	A
-------	----------	---

B.A	1st Year	A
-----	----------	---

B.A	2nd Year	—
-----	----------	---

BDA	2nd Year	—
-----	----------	---

LSCM	2nd Year	—
------	----------	---

Subject Mapping

Subject	Assigned Teacher
---------	------------------

CV	Dr. Swati Anand
----	-----------------

EVS	Dr. Swati Anand
-----	-----------------

English	Sushma
---------	--------

QABD	Kavya
------	-------

BDA	Kavya
-----	-------

Version 1 Scope

The first production release will support:

- Teacher Login
- Assigned Class Dashboard
- Attendance Management
- Test Marks Entry
- Assignment Marks Entry
- Monthly Attendance Reports
- Quarterly Attendance Reports
- Notes Management

- Automatic SMS Notifications for Absent Students

Future versions may include:

- Admin Dashboard
- Student Portal
- Parent Portal
- Timetable Management
- Examination Management
- Fee Management
- Push Notifications

Implementation Notes for Developers

- Teacher accounts will be provisioned manually through Supabase Auth.
- No registration UI should be developed in Version 1.
- Teacher permissions must be enforced using Supabase Row Level Security.
- All teacher dashboards should be populated dynamically from the teacher-to-class assignment relationship.
- Class visibility must never rely solely on frontend filtering; access restrictions must be enforced at the database level.

Architect's Note

This document is particularly valuable because it becomes **live seed data** for development. When we build the Supabase schema, we'll use these three teachers and their class assignments as the initial dataset, which means when the app first launches after login, each teacher will immediately see **their own classes** instead of placeholder data. This makes testing much closer to the real production environment from the very beginning.
